Double click the Waypoint icon on your desktop.

Click ok to the first window that tells you about the program, then you will see the main window.

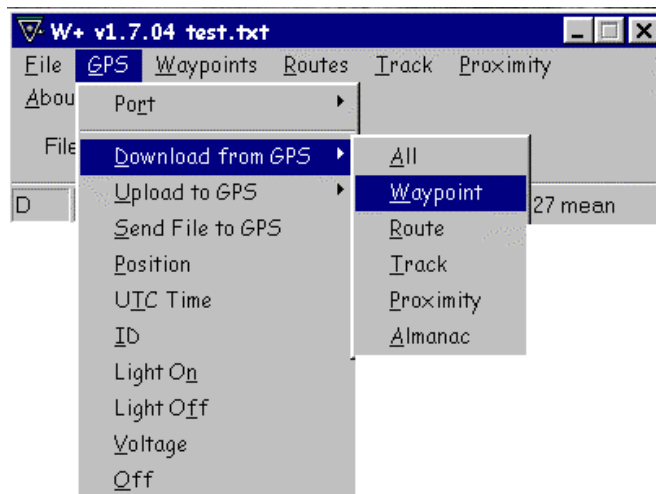

Select the GPS option and then Port to choose which port you are using to connect the GPS unit.

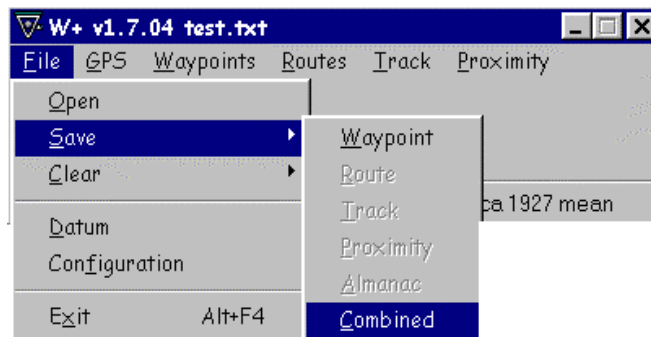

On the GPS unit, go to the interface screen. I/O should be set to GRMN/GRMN.

From the main Waypoint window, select GPS then download from GPS then select waypoint. All waypoints will be downloaded. You will see them scroll by on the main window.

Once you have downloaded this data, select File and Save and Combined to put all the waypoints into one file.

You will get the following screen.

Navigate to where you want to save the file and select comma delimited text file as the file type. Give your file a name and click Save. Your data is now ready to bring into ArcView.
